ABOUT THE DISTINGUISHED LECTURE

40+ years of experience developing telecommunications, speech, and audio signal processing systems for consumer and network system products. In addition to proven record of technology adoption in products and international standards as well as publication and granted patents, marketing and sales experience to develop over 300 new contacts in the world in two years and proof-of-concept (PoC) evaluations with world-leading companies for technical licensing are unique as a research engineer. Once representing Japan for ISO/IEC MPEG Audio standardization including an Interim Chair of the Audio Subgroup at the Angra dos Reis Meeting in Brazil, experiences extend to ITU and 3GPP standardizations as a delegate. Established a bridging career between industry and academia through 25+-year teaching experience at universities and supervision of 75 internship students. Delivered 215 invited talks in 97 cities in 31 countries, and received 25 awards. The sole inventor or a co-inventor of 273 registered patents in Japan and overseas. Fellow of IEEE as well as Honorary Member and Fellow of IEICE. A Distinguished Lecturer for Signal Processing Society (2014-2015) and Consumer Electronics Society (2017-2018), and a Distinguished Industry Speaker for Signal Processing Society (2020-2021), IEEE. Recognized as a Renowned Distinguished Speaker (The Rock Star) in 2020 by Consumer Electronics Society, IEEE.

Easy and Lazy Technical Writing: Solid logic to invoke an Aha-Experience

This talk presents an easy and lazy way for unexperienced authors to write a technical paper with a higher probability of acceptance. In technical writing, logic design before drafting is the key to the success. By analyzing the reviewers' task, the value of the paper and the trick to achieve it are identified as the most important components of the logical structure in the paper. It is also reconfirmed by a diamond shape derived from the expectation-reality relationship. In order to overview the whole manuscript and refine the logical structure, slide preparation before drafting is useful. A three-point analysis before slide preparation identifies the value, the trick, and the problem all mentioned earlier. The three-point analysis is performed with the help of a three-point analysis sheet specially developed for this purpose. The designated font size is 36 point, which forces the author to refine the essence repeatedly to complete the analysis. Design of the paper title and the topic sentence is straightforward using the value and the trick identified by the three-point analysis. Examples help the authors understand how the three-point analysis is performed. In the drill session, the authors have a chance to perform the three-point analysis with their own paper.

in Collaboration with
IEEE Signal Processing Society Bangalore Chapter
“Easy and Lazy Technical Writing: Solid Logic to
Invoke an Aha Experience.”

26 May 2025

The talk presented a structured and simplified approach to technical writing, aimed at inexperienced authors. It focuses on increasing the probability of paper acceptance by refining logical design before drafting.

Key Concepts during the talk

1. Logic Design Before Drafting:

- Emphasizes that proper logical structure leads to successful technical writing.
- Ensures clarity for both authors and reviewers.

2. Reviewer's Perspective:

- Analyzes the reviewer's task to understand key expectations.
- Identifies the value of the paper and tricks to enhance acceptance chances.

3. The Diamond Shape Model:

- Forward Triangle and Backward Triangle
- Represents the expectation-reality relationship.
- Helps refine manuscript clarity and effectiveness.

4. Slide Preparation Before Drafting:

- Enables a structured overview of the manuscript.
- Improves logical coherence before writing.

5. Three-Point Analysis Approach:

- Focuses on **value, trick, and problem** as key components of technical writing.
- Uses a specially designed three-point analysis sheet to repeatedly refine the paper's essence.
- Large font size (36 pt) forces concise refinement.

6. Title and Topic Sentence Design:

- Based on value and trick identified in three-point analysis.
- Ensures a clear and compelling title.

Examples illustrated how the method is applied in real-world technical writing.

This talk introduced an efficient, structured approach to technical writing that optimizes manuscript clarity and increases acceptance probability. By focusing on logical design, reviewer expectations, and structured refinement, authors can craft high-quality papers with minimal effort. The practical methods provided, including slide preparation and three-point analysis, make technical writing more accessible and impactful.

Feedback Summary

Easy and Lazy Technical Writing: Solid logic to invoke an Aha-Experience

by

Prof. Akihiko K. Sugiyama (Ken), Damas.Cus Corporation / Tokyo Metropolitan University, Tokyo, Japan

Date: 26 May 2025 | Time: 10:00 AM IST

Venue: Auditorium 2, BSN PJ Block, B.M.S. College of Engineering, Bengaluru.

Participants from Different Universities/Colleges

- B.M.S. College of Engineering
- AMC Engineering College
- CMR University
- KLE Society's Nijalingappa College
- SJBIT College
- Dayananda Sagar College of Engineering
- Sir. M. Visvesvaraya Institute of Technology
- REVA UNIVERSITY
- Bapuji Institute of Engineering and Technology
- Global Academy of Technology

Sample Feedback

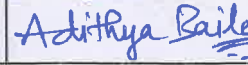

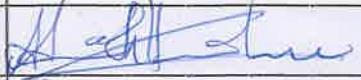

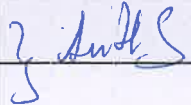

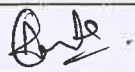

- More sessions like these will be good
- would want more technical writing talks
- Can have more interactive sessions.
- Was really insightful
- Thank you for organising this insightful session!
- It was a good session and got a few new inputs.
- Understood, learned something new, prof. Ken was really good in communication, overall it was a wonderful session.
- It was really informative session.
- Great session
- Overall good
- To be honest, I walked into “Easy and Easy Technical Writing to Invoke the AHA Experience without expecting much—technical writing has never really sounded exciting. But this session completely flipped that perception. What

seemed like a dry, mechanical skill turned out to be surprisingly creative and approachable. The way the concepts were explained made everything feel intuitive, and I found myself genuinely interested in trying it out myself. It made technical writing feel less like a chore and more like a powerful tool to communicate ideas clearly, especially in something as intricate as SOLIDWORKS. I'm actually looking forward to exploring it more now.

- Very good insight for students to write quality papers.
- Good session
- Amazing! Please keep more sessions like this.
- Good
- An amazing session from Ken sir. It was an excellent session. 100% worth my time. Looking forward to more such sessions by such amazing speakers.
